

Thomas Colovic

Senior Full-Stack Developer | PHP/Symfony · React/Next.js ·
TypeScript | APIs

Full-stack developer with a strong backend focus (PHP/Symfony), API design, performance and code quality. Hands-on full-stack experience (React/Next.js TS), CI/CD, and AI/TTS voice-cloning integrations. I value supportive environments, knowledge transfer, and impactful digital products. Problem-solver at heart — in code, on a climbing wall, or over a chessboard. Open to discussions around PHP, API design, React/Next.js (TS), audio AI (TTS/voice cloning), and developer best practices (CI/CD, clean code).
